

Adverse Reactions to Fluoroquinolones

The following adverse reactions to fluoroquinolones have been reported. This should not be considered an exhaustive list of possible reactions, nor is it meant to be a diagnostic tool for fluoroquinolone toxicity. But, these are examples of the side effects from the drugs.

Consult your physician if you think you are suffering from an adverse reaction to a fluoroquinolone. Look up your record of drugs you have been prescribed including oral drugs, eye drops, ear drops and even inhalers.

• Tendinitis	• Speech/aphasia
• Tendon rupture	• Suicidal ideation
• Ligament rupture	• Seizures
• Meniscus tear in knee	• Visual/auditory hallucinations
